

Brainstorming & Idea Prioritization Template

Date	24 June 2026
Team ID	SWTID-2026-8296
Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Mohammad Ayesha	Build a centralized model using XGBoost and Random Forest to handle high-risk vs low-risk multi-class data splitting.	Model Optimization	1
2	Ponnuru Jayasri	Design a Flask web dashboard for bank credit analysts to input income and employment details for real-time verification.	Web Interface	2
3	Shaik Arif	Deploy the finalized pipeline to IBM Watson Machine Learning cloud to provide continuous uptime and external API endpoints.	Cloud & Deployment	3

4	Mohammad Ayesha	Convert multi-class past-due loan codes into binary labels (0 or 1) using Scikit-Learn to filter out high-risk applicants quickly.	Feature Engineering	1
5	Ponnuru Jayasri	Add a customer self-service calculator portal where applicants can check their pre-eligibility scores before final submission.	Web Interface	2

Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority	Selected (Yes/No)
1	Machine Learning Pipeline & Feature Engineering (Binary risk modeling with Random Forest/XGBoost, processing raw status codes).	High	High	1	Yes
2	Flask Application Development (Interactive UIs for both Bank Credit Analysts and Customer	High	High	2	Yes

	Self-Service portals).				
3	IBM Watson Cloud Deployment (Constructing a real-time web endpoint pipeline for automated web application queries).	Medium	High	3	Yes
